		 Developed a proprietary oil blend consisting of seven oils, <i>Elixir</i> Sapta, with the following characteristics: very light (η = 5 mPa.s); good spreadability on skin; low freezing point (4°C); capable of solubilising solid phyto-actives. Microemulsions [6] as well as nanoemulsions [5] with <i>Elixir</i> Sapta were developed using a proprietary mixture of emulsifiers. These emulsions formed the basis for several commercial products of Almora Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, i.e., <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, <i>Restorative Nail</i> & Cuticle Oil, Serum for Fine Jaron Botanica, <i>Restorative</i>, <i>Restorative</i>		
		 In vitro experiment models, along with basis for product specialized Avino 	nts using Episkin h clinical studies, efficacy and se	n's RHPE as well as T-skin , indicated a strong biological nsorial benefit. By packaging <i>ue ingredients</i> into micro- and
